The Fibers’ FIOC (Field-installable Optical Connector)
[Re-assembly procedure]
Research and Development Team
The Fibers
Re-assembly procedure - 1

This is the re-assembly procedure for TheFibers’ Field-installable optical connectors (FIOCs).
Re-assembly procedure - 2

Pull out the slide holder to right-hand side, as shown in the picture above.
Make the flange holder wide open using the slide holder to be ready for putting the fiber, as shown in the picture above.
Re-assembly procedure - 4

Make sure that the slider holder is located at the same position in the slide 1, as shown in the picture above.
Re-assembly procedure - 5

Place the end of the slide holder on the insertion guide as shown in the picture above.

End of the Slide Holder should be placed here.
Hold tight both the end of the slide holder and the insertion guide, and press down the connector body until you can get a click sound, as shown in the picture above.
To make sure that every part is located properly, pull the slide holder to right-hand side using the tip of the thumb nail, and pull the body to left-hand side as shown in the picture above. This is the end of the procedure.
